Pharmapac-Genesis™ is Hydropac's first validated offering within the Pharmapac brand, designed as a cost effective, single-use system to protect refrigerated payloads (2 – 8°C) for at least two days during transit.

Consisting of a heavy-duty recyclable polystyrene (EPS) container, robust ice packs and an innovative filter pack designed to regulate internal temperatures, Hydropac have been able to achieve superior year-round thermal protection minus the complexity and cost.

Simple, affordable, effective.

The science behind Pharmapac-Genesis™ Filter Pack

Two layers of encapsulated water separated by an insulative panel

- First layer of water absorbs the majority of the sub-zero thermal energy from the ice pack.
- Insulative panel controls the rate of cooling of the second layer of water to ensure sample temperatures do not deviate outside the 2 – 8°C temperature window.
