Ice Packs – For Frozen

HydroFreeze™

HydroFreeze™ and HydroFreeze™+ are our ice packs containing a unique food safe formula, designed to enable safer shipping of frozen goods. They work in the same way as dry ice, but are much safer as, unlike dry ice, HydroFreeze™ products are not classed as hazardous goods when shipping, and they do not require any specialist handling.

Both versions of HydroFreeze™ can maintain temperatures at -20°C for an extended period of time. It consists of food safe and natural ingredients, found in your everyday life!

- Recommended Freezing/Storage:
HydroFreeze™ : -45°C for at least 12 hours or -35°C for at least 24 hours*
HydroFreeze™+ : -45°C for at least 24 hours or -35°C for at least 48 hours*

* Freeze times are largely dependent on the freezer temperature and the quantity that is being frozen at that particular time (i.e. pallet load will take considerably longer to fully prepare compared to a single pack). Ensure sufficient cold air circulation around the product for efficient freezing and be aware they will take longer to freeze than normal water/gel ice packs. Freezing below these temperatures may not fully freeze the HydroFreeze™ & HydroFreeze™+. For more information, please visit our website.

EasiFreeze[™]

What is the difference between EasiFreeze and HydroFreeze+?
EasiFreeze is designed to hold a shipping temperature of -16°C.
HydroFreeze+ is designed to hold a shipping temperature of -21°C.

Both solutions are ideal for the safe thermal preservation of frozen goods, but where the EasiFreeze formula really excels is its shorter freeze times. EasiFreeze ice packs will freeze approximately 33% quicker compared to

Recommended Freezing/Storage

Freeze times are largely dependent on the freezer temperature and the quantity that is being frozen at that particular time (i.e. a pallet load will take considerably longer to fully prepare compared to a single pack). Ensure sufficient cold air circulation around the products for efficient freezing and be aware they will take longer to freeze than normal water/gel ice packs. Freezing durations and temperatures above serve as a guideline – interruptions in the freezing process (e.g., frequent ins-and-outs, adding warm items to the freezer, etc.) will increase the time taken to freeze.
